- CGPA: 7.3

WORK EXPERIENCE

Project#: *Healthcare and Life Science*

Client: *Ascension*

Company: *Tech Mahindra*

Period: *2021- Present*

Project Description:

Supported and maintained a healthcare application for patient registration and document management integrated with Cerner Invision. The application streamlined patient onboarding, document processing, and workflow management, improving operational efficiency and user experience. Resolved user issues within established Service Level Agreements (SLAs) to ensure timely support.

Roles & Responsibilities:

- Provided Level 2 Application Support for Cerner Millennium, Epic and integrated US healthcare applications, ensuring high system availability and user satisfaction.

- Resolved production incidents within SLA by troubleshooting application, interface, and user access issues while minimizing business impact.
- Handled Priority 1 (P1), Priority 2 (P2), Priority 3 (P3), and Priority 4 (P4) incidents, ensuring timely resolution in accordance with SLA commitments and minimizing business impact.
- Managed and prioritized production support tickets based on incident severity, coordinating with cross-functional teams to restore services within agreed SLA timelines.
- Managed user provisioning by creating, modifying, and troubleshooting security roles, provider accounts, and application access permissions.
- Investigated and resolved patient data mismatches, missing records, and workflow issues across Cerner and Epic environments.
- Collaborated with Epic Interface and integration teams to resolve data synchronization issues between Healthcare applications.
- Monitored and supported HL7 ADT message processing to ensure accurate patient admission, discharge, transfer, and demographic data exchange.
- Diagnosed and resolved interface failures by monitoring interface queues, restarting services, and coordinating with infrastructure teams.
- Installed, configured, and upgraded Healthcare applications, printer drivers, and Fujitsu Scanner software on end-user systems.
- Performed application configuration, build validation, Quality Assurance (QA) testing, and User Acceptance Testing (UAT) for production changes.
- Reproduced reported issues in test environments, performed root cause analysis, and validated fixes before production deployment.
- Managed Change Management activities, including impact analysis, implementation, testing, and post-deployment validation.
- Created and maintained customized Payor and Health Insurance plans to support accurate billing and reimbursement processes.
- Performed Melissa CASS updates on production servers and supported application maintenance activities across multiple Healthcare facilities.
- Created test patient records and supported project implementation, system enhancements, and application validation activities.
- Delivered remote technical support using RDP and Bomgar to troubleshoot application, hardware, and network-related issues.
- Provided 24×7 on-call production support, ensuring rapid resolution of critical incidents and maintaining SLA compliance.
- Collaborated with cross-functional teams, business users, developers, QA, infrastructure, and vendors to drive incident resolution, continuous improvement, and operational excellence.

ACHIEVEMENTS

- Achieved 98% customer satisfaction through timely issue resolution and stakeholder communication.
- Consistently resolved critical incidents within SLA commitments.
- Supported Revenue Cycle Management operations across multiple healthcare facilities.
- Conducted knowledge transfer sessions to improve team productivity and onboarding effectiveness.
